## PERSONAL PROJECTS

### Weather app - [Github](#)

Weather Application loads cities current weather using OpenWeatherMap API & GeoDB API

- Fetches and displays weather information for cities over 100,000 in population
- Displays custom weather icon based on current weather
- Auto-complete City Search

### Old North Acres - [Github](#) | [Demo](#)

Review based application for users to write reviews and rate different lodging options

- Utilize user authentication to permit administrator to edit or delete individual reviews
- Built proprietary star rating system using radio buttons and React useState hook for users to rate and change a review rating on a scale of 1-5
- Implemented EmailJS for site users to easily submit a contact form via email

### Todo List - [Github](#) | [Live Demo](#)

React application allows users to create a list, check off items after completion or delete items off the list entirely

- Local storage allows users to save a users list after a page refresh
- Used React Hooks useState & useEffect to render & save state changes

---
